History AutoCAD Free Download started out as a tool for mechanical design. In 1981, Ray Reis and Gary Kobylinski created an in-house CAD program for the Hewlett-Packard Company (HP), which became known as VectorWorks and shipped in 1982. VectorWorks was marketed as a CAD application for small- to medium-sized businesses, intended to bridge the gap between mechanical CAD applications and desktop publishing tools. Key concepts "AutoCAD Crack Mac is a word processor on the computer. It's very simple; all you do is draw and hit the [Enter] key." —Louis Flores, author of Louis Flores: The Autodesk Story According to the Autodesk product description, "AutoCAD is a registered trademark of Autodesk, Inc. in the United States and/or other countries. Autodesk, Inc. is a wholly owned subsidiary of the Autodesk Group." The company offers AutoCAD as a stand-alone product, part of the Autodesk Applications suite (AutoCAD is only available as part of AutoCAD LT or AutoCAD Premium), as a mobile app (AutoCAD Mobile), as a web app (AutoCAD.com), and as a cloud-based service (AutoCAD Cloud). Version 1.0 In 1982, Autodesk released AutoCAD, their first in-house CAD program for HP minicomputers. This first version was relatively primitive, focusing on mechanical drafting, 3D modelling, and 2D schematic design. It was bundled with a proprietary hardware set and a 25- or 100-page manual. In 1983, HP announced VectorWorks, Autodesk's new in-house CAD application. VectorWorks is a 3D drafting and visual design tool that is the first commercially available application that performs simultaneous 2D and 3D drafting. It was the first desktop app that combined

A Study of Demand for Radiation Treatment Services in a Urological Oncology Setting in Uganda: Implications for Health Policy and Infrastructure. To study the demand for radiation treatment services in a urological oncology setting in Uganda. The study population consisted of patients referred to the Uganda Cancer Institute, for radiation therapy services, for treatment of prostate, bladder, and kidney cancer. Demographic, clinical, and treatment characteristics were obtained from patient records. The patients were then interviewed using a structured questionnaire. The proportion of patients receiving radiation treatment was considered as the main outcome measure. The association between the main outcome and potential predictors was investigated using the Chi-square test. The mean age of the sample was 65 years. The main treatment modalities for treatment of prostate cancer were external beam radiation therapy (EBRT) and brachytherapy (BT) (69% and 31%, respectively). Treatment of prostate cancer did not differ significantly between public and private health care settings (71% vs. 69%, $p = 0.8$). A total of 94% of the respondents
