We sought to determine the effect of vasodilators on myocardial blood flow and metabolism during acute coronary artery occlusion. The effects of nicorandil (Nico) and dipyridamole (Dip) on myocardial blood flow were tested in four anesthetized mongrel dogs with a left circumflex coronary artery (LCx) occluder. Hemodynamic measurements were made continuously. Simultaneous blood samples were taken from the LCx and aorta. Myocardial blood flow was measured in the LCx territory and in the non-ischemic area of the left ventricle by means of radioactive microspheres. Myocardial oxygen consumption was calculated from the product of coronary
