Now I want to add some text to that image. I know i can use a label to accomplish this, but I'm more of a coder. So I was thinking of placing the text on top of the image. Is it possible to do in iPhone OS? or do I have to code something on top of it? A: You can use the CALayer's maskToBounds method to create "holes" in the layer. You can also place the text on top of the image, but have a look at this: How do I insert an image in a UITableViewCell with a mask? It will lead you to methods to

This is a compilation album by Jamaican reggae singer Fantan Mojah. It was released in late 2009 on CD. It is often referred to as Q: When is the story of Kvod's exile to the north finished? Kvod was exiled to the north, when and how was this settled? I know that the final episode of the first season aired about a year ago, but I'm more interested in the outline of the third season, or earlier. I know they have been making episodes for some time, but in the final release we were only able to see some parts of it. A: After reviewing all articles posted, it seems that the series will officially end in about a year, about the end of May 2020. Update: The series was renewed for a third season. The second season was released on August 4th and the episode "Mubabbaraf" was removed from the final release. In other words, the third season should start about a year from now. *In vitro* and *in vivo* biosynthetic labeling reveals transport of [35S]glutamate in *Drosophila*. Transport mechanisms for the neurotransmitter glutamate have been studied in *Drosophila*. It has been proposed that the ubiquitous vesicular neurotransmitter transporter vesicular glutamate transporter (vGluT) is the major transporter for neurotransmitter glutamate uptake. We determined whether this assumption is valid by measuring [35S]glutamate transport by vGluT. The *in vitro* transport was measured by incubation of 0.1 mM [35S]glutamate with membrane vesicles from testis, which contain vGluT. This transport was saturable, dose dependent and specifically inhibited by glutamate, glycine and the inactive analogue [36S]glutamine. Glutamate transport was stimulated by Na<sup>+</sup>. vGluT-mediated transport was specific for the bioactive neurotransmitter glutamate and was not observed with other amino acids or with some non-biogenic compounds. The *in vivo* transport of [35S]glutamate was investigated in the adult flies that constitutively express vGluT. Adults

were injected with a single intra-abdominal injection of [35S]glutamate and the distribution of the tracer after 1, 5, 10 and 24 h was determined. The tracer was then extracted into saline and the tracer in the head, thorax
